

Installation instructions:

1. Open QGIS and go to: Scripts >> Tools >> Add script from file (To activate the Processing Toolbox go to Menu >> Processing >> Toolbox or press Ctrl + Alt + T)
3. Navigate to the script folder and select **SwathProfile.py**
4. The new script will be now accessible in User scripts. Double click to launch it.

5. To add the help file, copy **SwathProfile.py.help** to UserFolder/.qgis2/processing/script
6. Run **SwathProfile** algorithm with sample data, it should include documentation

5. Use left and right buttons to change between profiles in the graphic window
